

Welcome to your Digital Legacy Hub

Plan for what happens to your accounts, data, and AI likeness

This is a free educational tool about what happens to your online accounts, your data, and increasingly, AI-generated versions of you or people you love, after death. It explores a genuinely new question: should an AI be allowed to keep "talking" as someone who has died, and what do different cultures, religions, and legal systems already say about that?

Nothing on this site is legal advice. It is designed to help you think, discuss with people you trust, and take real next steps such as writing a proper will with a qualified solicitor.

Please note: this tool does not contain death-related imagery and is designed to be approachable for people of all ages and backgrounds, including those currently grieving. If you are struggling emotionally right now, please reach out to a trusted person, your GP, or a bereavement support service such as Cruse Bereavement Support (UK) rather than relying on this site alone.

NEW What this project's own 80-person survey found

Between all three research strands, an anonymous survey of 80 people is now complete. The headline finding is not a culture war, it is something closer to quiet consensus: personal comfort with this technology is low almost everywhere, regardless of religion, culture, technology confidence, or age, while near everyone agrees on the same guardrails: be told it's AI, get the deceased person's own consent first, and don't charge an ongoing fee to keep talking to them.

This was a small, convenience (non-representative) sample, so read these as a real, revealing signal rather than a national statistic. [Read the fuller findings](#) →

START HERE

Build your Statement of Wishes

A short, honest six-step wizard covering your accounts, your AI simulation preferences, and the culture or faith that matters to you. Email it to yourself, copy it, print it, or save it as a text file.

FEATURED PERSPECTIVE

Ubuntu & African perspectives

From an Ubuntu ethical standpoint, a griefbot can be a gentle, permissible aid to grief, but only if it strengthens the web of relationships around you rather than replacing them. Wright (2024) argues permissibility rests on relational care, not on the technology alone.

Explore world traditions

PLAIN ENGLISH

UK & EU law

What actually happens to your accounts today, and what's changing in 2026.

Read the law →

REAL VOICES

Real stories

Talks and interviews from people who have actually tried this technology, now joined by this project's own completed survey and community-discussion findings, including anonymous quotes.

5 PLATFORMS AUDITED

Platform ethics

Five real AI griefbot and legacy platforms, compared against a five-part ethics framework.

Compare platforms →

Nine things worth knowing

- Most social platforms and email providers do *not* automatically hand your account to your family when you die. [See the law](#)
- An AI "griefbot" trained on a deceased person's messages is being offered commercially by several companies right now. [Compare platforms](#)
- Different faiths and philosophies, including Confucian, Daoist, and Ubuntu thought, reach very different conclusions about whether talking to an AI version of someone who died is comforting or harmful. [Explore traditions](#)
- From 2 August 2026, EU law requires AI chatbots to clearly disclose that users are talking to a machine. [Read more](#)
- Continuing bonds theory suggests an ongoing relationship with someone who died can be healthy, but research is clear this depends on how it's done, not just whether. [Read more](#)
- This project's own 80-person survey found cultural background clearly shapes traditional mourning practice, but did *not* predict comfort with AI simulation specifically, discomfort was widely shared. [See the findings](#)
- A short online wizard can help you think through your own wishes and produce a written statement to discuss with family or a solicitor. [Start the tool](#)

8. None of this replaces a real will. A written statement from this site is not legally binding on its own. [Why not?](#)
9. This project began as academic dissertation research and has now completed its platform audit, survey, and community-discussion research. [Learn about the project](#)

Digital Legacy Hub

A free, standalone educational tool about digital accounts, digital property, and AI simulation of people after death, and what world traditions and the law currently say about it. Not a law firm, therapy service, or product endorsement.

About this tool. This site is an accompanying artefact for a Master's capstone project submitted at the London Interdisciplinary School, researching cross-cultural ethics of AI-powered digital resurrection tools and digital legacy planning. It is an educational awareness tool first and foremost, built to help you think and talk with people you trust. **It is not a substitute for legal advice.** For a legally valid will, speak with a qualified solicitor. See the [About page](#) for the full project description.
